Fighting fire with fire

ELIMINATE ALL CRIME AND RELATED ACTIVITIES IN TWO DECADES

From the dawn of crime, here's the question we have failed to satisfactorily answer:

"Why are humans the strongest link in criminality but considered the weakest link in security?"

secrecy.plus

Criminals play to human strengths and deepen them over their lifetimes.

secrecy.plus

Take the case of 9/11:

- It was delivered by humans extending themselves with awfully repurposed tools and machines.

- Machines didn't stop what happened: didn't stop an unpredictable act of – in hindsight – quite predictably delivery.

- Machines failed us: the good citizens.

- Humans plus machines didn't, however, fail the bad guys.

The first steps to solving the problem posed involve:

1. The repurposing of what we already have:

#ai in its myriad forms

2. The re-engineering of a wider #it-#tech, that over the past 60 years has also failed – perhaps self-interestedly – to support human #intuition as much as it could have.

Our proposal in detail

Take the #it-#tech which *didn't* stop 9/11, and allow good humans to extend their intuition, arationality, high-level domain expertise, thinking without thinking, and gut feeling, by re-engineering the software architectures, tools and platforms which failed to prevent tragedy:

a) because our security philosophies said what we mainly needed was machines plus humans;
b) when what we actually needed was creatively uninhibited humans plus machines plus humans, so we could fight fire with fire … fight a creative criminality with a newly creative security and law enforcement.

The solution itself:

We've called it #hmagi – human/machine artificial general intelligence.

secrecy.plus

Our proposal in detail

Throughout #tech history we've all agreed machine goalposts move – we historically call it progress – whereas humans must remain static (because that's what #tech people tell us humans do).

And then eventually we are caught up and overtaken – almost smashed to existential smithereens, if you like.

The solution itself:

What we are calling #hmagi proposes a different paradigm.

Our proposal in detail

- Human goalposts *can* be enabled into movement – if we devise a collaboration of mutual benefit between humans and machines:
    - where through this collaboration humans capture and validate their deepest intuition, arationality, high-level domain expertise, thinking without thinking, and gut feeling;
    - and always in #secrecypositive #totalsurveillance-compliant spaces of absolute data-subject confidence and trust.

To such an extent that not only criminals will have been the strongest link in creative criminality since the dawn of crime itself ...

... but the rest of us will become the strongest link in a newly creative security, counter-terrorism and law-enforcement practice.

secrecy.plus

Medium- and long-term deliverables:

Eliminate	Reduce	Dismantle
Eliminate traditional #crime in a decade	Reduce the incidence of what we call #neocrime by 40 percent in 13 years	Dismantle the practice of #zemiological activity completely in 20 years

Short-term deliverable:

01

Bring to the statute books the new criminal figure of #neoterrorismontheindividual in no more than 3 years, with widespread prosecutions and a deliverable prevention in no more than 7 years from when we pass the laws themselves
